Goodwill® Digital Brand Guidelines

GOODWILL INDUSTRIES INTERNATIONAL, INC.

MARCH 2019

Introduction

These guidelines are the first step toward creating a true visual identity for Goodwill Industries International and any Goodwill organizations that wish to adopt them. This document focuses on the conventions necessary to bring the brand to life online and ensure consistency across digital channels.

The following pages lay out the correct usage of all brand elements from general look and feel to colors, fonts, graphic elements and images. Sample web applications are included as a jumping off point for the assets you create.

The goal of the design of the brand elements is to give you the components you need to create digital designs that feel contemporary while still conveying the dependability and trustworthiness of the Goodwill brand.

Brand Persona

HOW WE SHOULD APPEAR	HOW WE SHOULD SOUND
Current, modern and welcoming— Our website is a destination that feels familiar and is easy to navigate	Friendly, relatable, caring and empathetic— We put people first and communicate with our audiences' needs and interests in mind
Venerable, accomplished, time-tested and enduring	Dependable and trustworthy— We have strengthened communities since 1902
Energetic and vibrant	Inspirational, uplifting and motivating— Whether it's describing job services, teaching how to thrift like a pro, or sharing the story of someone who earned a job or advanced their skills with Goodwill's support

The Logo

Created in 1968, the Smiling G trademark is the logo that represents the Goodwill brand. Whenever you use the Smiling G logo, and in at least the first instance of using the wordmarks Goodwill or Goodwill Industries, make sure the ® symbol is legibly displayed.

Please be sure to use the correct logos in all collateral found in the “Trademarks and Logos Portal” site on MyGoodwill. Once you are logged into MyGoodwill, search “Trademark and Logos Portal” or scroll to the bottom of the “All Sites” section.

Color Usage

The preferred version of the trademark is the positive two-color version, which uses PANTONE® Reflex Blue and Black. Please refer to an official PANTONE Color Formula Guide System for accurate matching, or speak with your vendor when printing digitally.

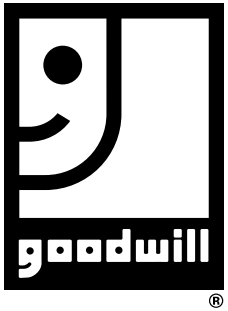
Four options are available for trademark reproduction purposes:

Two-color use: Black with Reflex Blue

One-color use: Black

Alternative one-color use: Reflex Blue

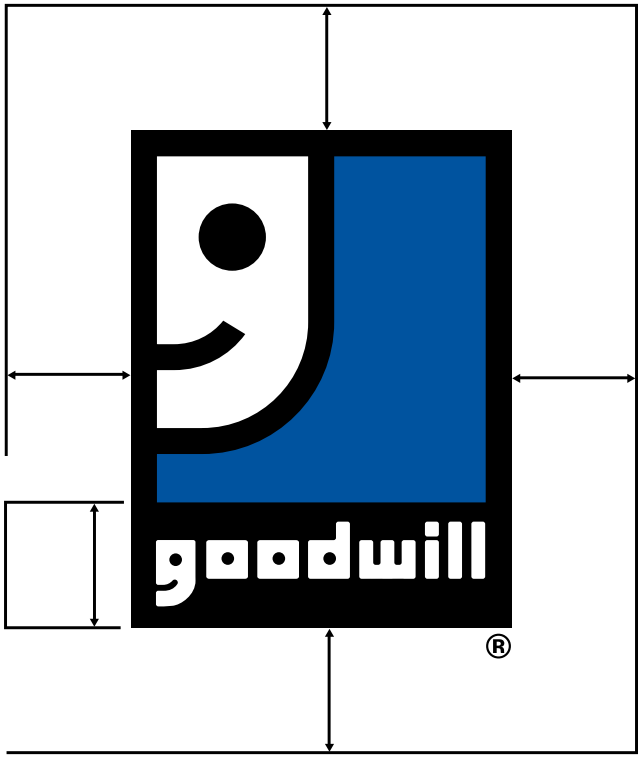
Reverse use: White on solid background



Spacing + Sizing

To give the Smiling G trademark "room to breathe," it should appear surrounded by ample space, with the registered trademark symbol falling below the lower right corner. Trademark proportions must remain constant in all reproductions. A rule of thumb: the spacing all the way around the Smiling G should be equivalent to the size of the black bar at the bottom of the mark.

In order to maintain quality reproduction and legibility of the trademark and its elements, the size of the logo should not be smaller than 0.25" wide. There is no limit for enlarging the trademark, as long as it remains proportionate.



NO SMALLER THAN 0.25" WIDE

Misuses

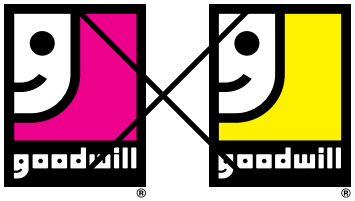
To ensure consistency and recognizability of the Goodwill brand, it is important that the Smiling G be used according to the guidelines.

If you are unsure whether the Smiling G you have on file is correct, consult with GII. The marketing team can send you the correct logo and logotypes and can provide assistance in creating regional, customized logotypes.

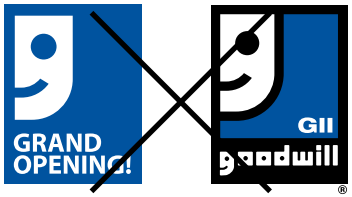
Is your Smiling G smirking? There is an incorrect variation of the logo in use by some Goodwill members that is dubbed the Smirking G. In the word "Goodwill" in the bar, the mouth of the G is wide open, the Os do not have perfect circles in their centers, and the mouth of the face is stretched horizontally. If you have this version of the logo, please discard the file and replace it with the Smiling G found in the "Trademarks and Logos Portal" on MyGoodwill.

DO NOT stretch or skew.

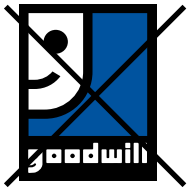
DO NOT colorize.



DO NOT add text.

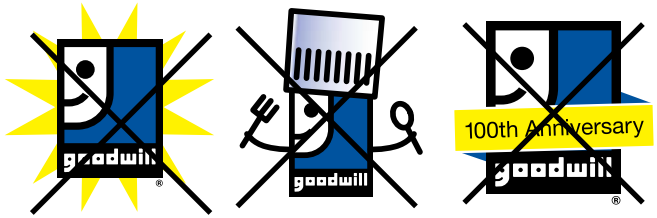


DO NOT use without the ®.



DO NOT pull apart the logo.

DO NOT add design elements.



DO NOT create holiday themes.

Registered Wordmarks

The following wordmarks are the most commonly used by Goodwill members. These and others are officially registered (see the “Trademark and Logos Portal” on MyGoodwill).

GOODWILL®

GOODWILL INDUSTRIES®

When using a wordmark in documents, presentations or marketing collateral, display the registered trademark symbol ® at least the first time the mark appears, or each time if preferred.

Members may not officially register for any variation of the Goodwill trademarks, including marks containing “Goodwill.” GII is the owner of Goodwill marks, which are then licensed to members. Members may contact GII to discuss the possibility of registering new marks.

Goodwill®

Goodwill Industries®

Colors

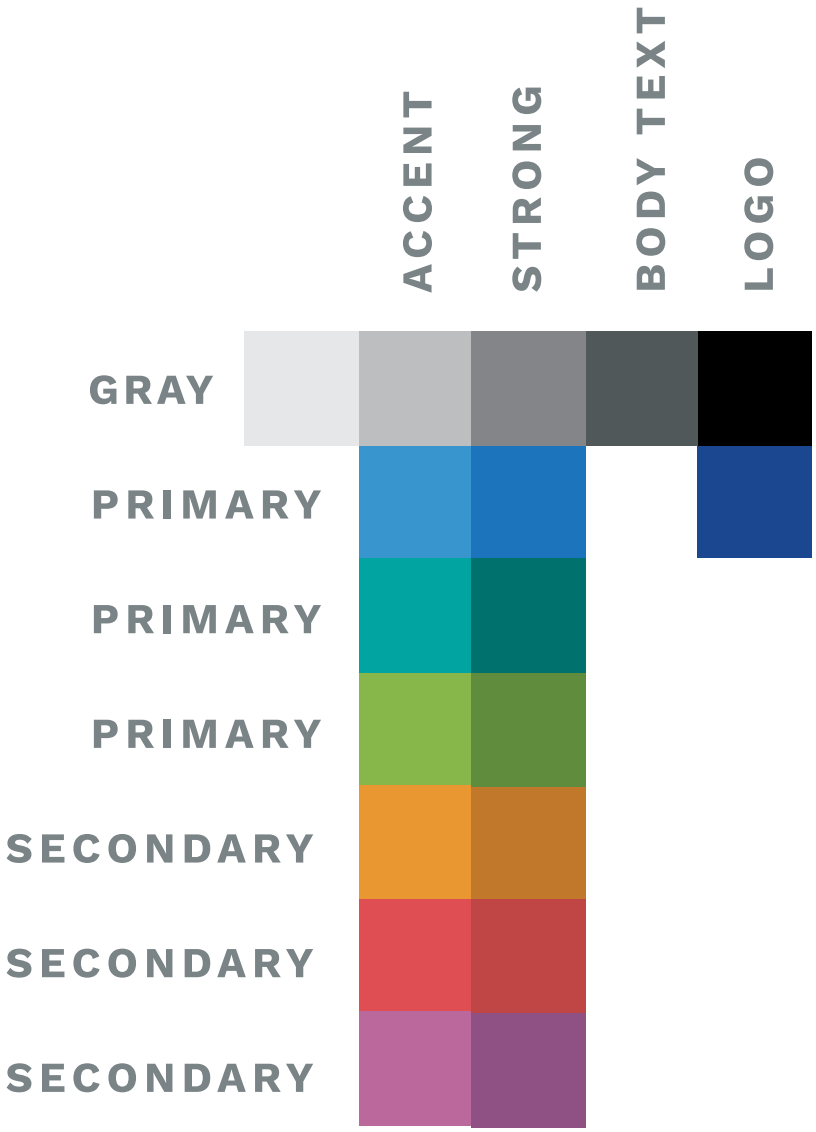
The Goodwill digital color palette expands upon the black, white, and Reflex Blue of the Smiling G logo. The primary colors are cool hues that create a trustworthy, welcoming brand presence. Warmer secondary colors and brighter accents add energy and variety to brand materials. Colors should be used sparingly, leaving generous white space, and with legibility in mind.

Overview

This matrix visualizes the hierarchy of brand colors, and outlines how each color should be used in application.

The Primary brand colors should be used predominantly. The Secondary colors can be used to draw attention, or in instances in which color coding is desired. A spectrum of grays are available for interface and neutral elements.

Colors in the Accent column should be used for graphic details and non-essential information to add brightness to designs. Strong colors can be used for dominant or bold text and as backgrounds for white text. Body paragraph text should be set in the correct dark gray.



Color Values: Logo Palette

Reflex Blue, black, and white are the three colors of the Smiling G trademark, which represents the Goodwill brand.

Reflex Blue may be used for dominant typography throughout the site and brand materials to supplement the primary palette of colors. It should be used in moderation as part of the full spectrum of brand colors, not as the main color.

Avoid the use of black in graphic elements besides the Smiling G logo.

BOLD	CMYK	RGB	HEX	PMS
BOLD BLUE	100-84-11-1	25-71-144	#194790	Reflex Blue
LOGO BLACK	0-0-0-100	35-31-32	#231f20	Black 3

Color Values: Primary Palette

These primary colors should be used most noticeably throughout Goodwill brand materials.

Strong and Accent blues are extensions of the logo's Reflex Blue, and therefore make up the core of the brand look. These blues, along with the teals and greens, create a rich combination of brand colors.

The Strong colors, when used with large and/or heavy text weights, are WCAG AA compliant. The accent colors should be used for supplemental graphic elements and subtle interest, not for essential information or differentiation.

STRONG	CMYK	RGB	HEX	PMS
STRONG BLUE	85-50-0-0	27-117-188	#1b75bc	2131
STRONG TEAL	89-37-56-16	0-112-109	#00706d	2224
STRONG GREEN	67-26-100-9	97-140-61	#618c3d	2280

ACCENT	CMYK	RGB	HEX	PMS
ACCENT BLUE	73-29-2-0	58-149-205	#3a95cd	660
ACCENT TEAL	79-13-42-0	4-163-159	#04a39f	2221
ACCENT GREEN	53-9-93-0	135-182-94	#87b64a	7490

Color Values: Secondary Palette

The warm colors of this secondary palette should be used to supplement the primary cool palette, to draw attention or provide a broader opportunity for color coding content.

These colors should not be dominant elements of Goodwill brand materials.

The Strong colors, when used with large and/or heavy text weights, are WCAG AA compliant. The Accent colors should be used for supplemental graphic elements and subtle interest, not for essential information or differentiation.

STRONG	CMYK	RGB	HEX	PMS
STRONG GOLD	8-83-67-16	193-120-43	#c1782b	7566
STRONG RED	8-83-67-16	192-70-70	#c04646	201
STRONG PURPLE	52-81-27-0	142-81-131	#8e5183	511

ACCENT	CMYK	RGB	HEX	PMS
ACCENT GOLD	2-43-91-4	232-152-49	#e89831	7413
ACCENT RED	8-85-67-0	223-78-81	#df4e51	7418
ACCENT PURPLE	27-71-10-0	187-104-156	#bb689c	513

Color Values: Gray Palette

This grayscale palette provides a variety of shades for use in content and interface elements.

Light gray is useful as a background element to differentiate a section of content, or as a very subtle separating stroke. Accent and Strong gray can be used for other architectural details.

Text gray should be used for all of the site's paragraph text—it is WCAG AAA compliant at all sizes, and more approachable than the harsh black used in the Smiling G logo.

	CMYK	RGB	HEX	PMS
LIGHT GRAY	100-84-39-31	230-231-232	#e6e7e8	427
ACCENT GRAY	73-34-10-0	188-190-192	#bcbec0	429
STRONG GRAY	41-15-100-0	132-134-137	#848689	383
TEXT GRAY	100-84-39-31	81-88-90	#51585a	425
LOGO BLACK	73-34-10-0	35-31-32	#231f20	Black 3

COLORS

Samples of Use

To create a look that is dynamic but focused and clear, it is important to be consistent in use of color.

The Primary Strong Colors should be used most visibly throughout the site. Strong Colors can be used for dominant or bold text, like headlines, navigation, or labels. They can also serve as backgrounds for white text, as in buttons and interface elements.

Accent Colors should be used to create hierarchy in designs. They should be used more for secondary and tertiary interface elements than for primary page content. Accent Colors should always be used with large and/or bold text. Use Accent Colors with their corresponding bold color to add brightness while maintaining high contrast for key information.

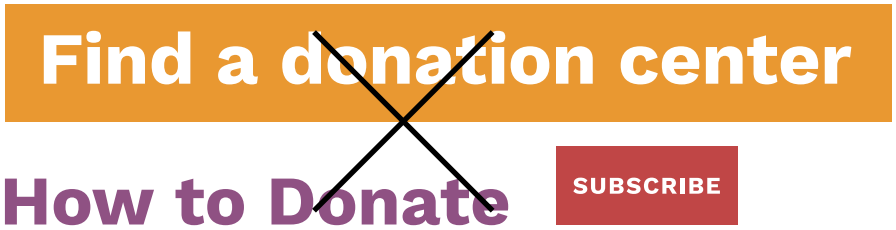
BOLD COLOR FOR CONTENT BACKGROUND WITH ACCENT COLOR INTERACTION DETAIL

Misuses

To ensure a recognizable brand style and legibility, it is important to use colors consistently and thoughtfully.

While Goodwill is a vibrant brand, the use of color should be restrained and not overly playful. Color should be used to draw attention, differentiate content, and indicate interactions, rather than for eccentric decoration.

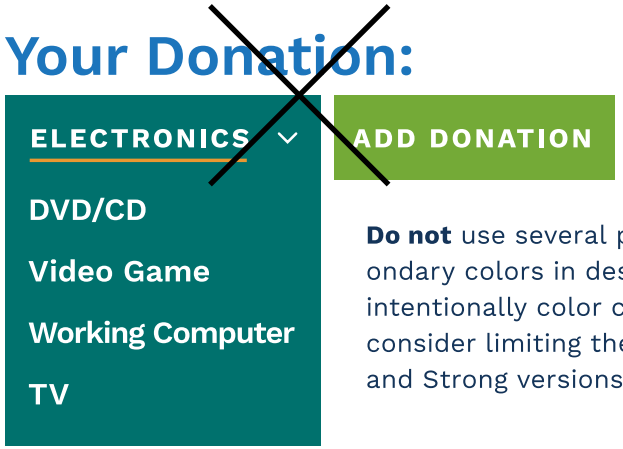
Colors should be used with legibility and accessibility in mind; adequate visual contrast between foreground and background is essential.



Do not use the secondary palette for text headlines or buttons.

Do not use colors for body text. Only Body Text Gray, Reflex Blue, and bold weight Strong Teal for links should be used in body text.

Do not place essential text in Accent colors on Strong colors, or Strong colors on Accent colors. These subtle color combinations should only be used for interface elements and interaction states.



Do not use several primary and secondary colors in design modules unless intentionally color coding content. If not, consider limiting the palette to Accent and Strong versions of the same color.

Typography

Goodwill digital designs are set in Work Sans. Its wide, friendly form is legible and inviting, and complements the typography of the Goodwill logo while adding additional personality. Text can be set in a variety of weights, cases, and colors to create interest and hierarchy, which enables easier reading.

Typeface

The Goodwill website design is set in Work Sans, a free font available to download from Google Fonts **here** for both online and desktop use.

Work Sans does not have a true italic style, but can be styled in italics for digital use as needed.

training and the power of work.

Type & Color (1/2)

Consult the brand color matrix to determine in what contexts colors can be used.

Body text should always be dark gray. Do not use bold or accent colors at body text size (unless also increasing the font weight) to ensure legibility.

The Primary Strong colors and Reflex Blue can be used for larger or bold text applications, in upper or mixed case. Accent colors should be used sparingly for text.

ADD DONATION

Iconography

Because Goodwill has such a wide variety of offerings, it can be helpful to use icons to represent different parts of the brand experience. Icons can be used alongside a text label to add visual interest and context, or they can act as a somewhat universal shorthand to communicate additional information without the clutter of additional language. They should not be used as purely decoration.

Icon Style

Icons for Goodwill are inspired by the rounded geometry of the Smiling G logo. Icons should use simple shapes to communicate different aspects of the Goodwill experience.

Icons should be solid fills, using minimal strokes and shape separations to convey the image. Strokes should be a consistent, heavy weight. When possible, include circular elements in icons to echo the Smiling G. Icons should hold up at small sizes (however, avoid use smaller than 12 x 12 px), ensuring that their message can be understood in various contexts.

When space is available, icons can be placed in a circle for additional interest. The circle background should be 2x the height/width of the icon inside.

Icons can be color coded, using the full spectrum of Goodwill brand colors. Icons rendered in Accent colors should be paired with a text label of its meaning.

ICONOGRAPHY

Misuses

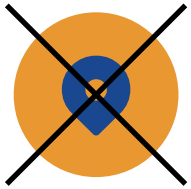
To ensure a recognizable brand style and legibility, it is important to treat icons consistently and thoughtfully.

Avoid the following when designing with existing icons or creating new ones.

Do not rely on stroke outlines. Icons should be created of geometric, rounded, solid fill shapes.

Do not use multiple colors within one icon. Icons can be rendered in any color, but only one at a time.

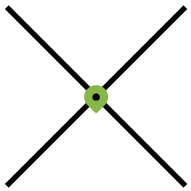
Do not reverse out icons on circles backgrounds when they will be used at small sizes. Using the plain icon in color maximizes a small space.



Do not place colored icons on circles of a different color. Icons on a circle color background should always be white.

Do not use stroke outlines on icons when placed on a circle color background (or ever).

Do not pair icons with text of a wildly different color. If the icon is an Accent color, render the text in the corresponding Strong color.



Do not scale icons smaller than an approximate 12 x 12 px size on desktop. Icons should be used proportionately with accompanying text, but should not be so small as to lose legibility.

Photography

Photography is an important part of the Goodwill brand, as it is the most effective way to showcase the people involved in the Goodwill experience. Photos can highlight individuals' stories and create rich and welcoming visuals for a brand that clearly values its people.

PHOTOGRAPHY

Photo Style

Photography for Goodwill should put people first, highlighting individuals' relationships with each other and Goodwill as a brand and organization. Rather than relying on images of objects, focus on people and their interactions with donations, etc. Photos should represent a diverse range of people to show the spectrum of the Goodwill experience.

Photos should show people in a lifestyle environment, framed to reveal their place in their surroundings; avoid overly staged or studio photography. Aim to capture an appealing, dynamic environment. Goodwill photos should be welcoming, uplifting, vibrant, inclusive, and dynamic.

Photos should generally be framed at a conversational distance, viewing subjects knee- or waist-up. Avoid extreme closeups and faraway framing, which feel make the individual seem isolated and impersonal.

PHOTOGRAPHY

Photo + Content

When photography is paired with body content, use an overlapping white background. This visually bridges the gap between photo and text, subtly differentiates content areas, and creates engaging depth on a flat screen.

The white space behind the right column of body text here extends on top of the photo, with the baseline of the headline text aligned with the bottom of the photo.

A gradient of Reflex Blue 40 percent to complete transparency can be applied from the bottom of the photograph to slightly increase the contrast between the image and the overlapping white plain.

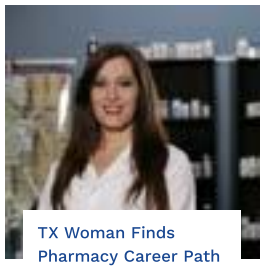
WI Man Builds Solid Life After Several Difficult Decades

Read David's Story



TX Woman Finds Pharmacy Career Path Within Reach

Read Virginia's Story

Overlay Treatment

Photos can be used as a background element to add context and interest, without distracting from the primary content.

In cases where this applies, the photo should be overlayed with Goodwill's logo color, Reflex Blue, at 75 percent opacity. Large, bold white text can then be placed on top of the image with an acceptable level of contrast for easy legibility. Avoid placing text over faces.

Overlay treatments should not be used when the photo is the main visual focus, or when no headline text will be placed on top. Photos should be unobstructed and used alongside, rather than behind, text when possible.
